Mounting and Clearance

Mounting Recommendations

Clearance

These drives can be mounted side by side, observing the following mounting recommendations:

**Specific Recommendations for Mounting the Drive in an Enclosure**

---

**Ventilation**

To ensure proper air circulation in the drive:

- Fit ventilation grilles.
- Ensure that there is sufficient ventilation. If there is not, install a forced ventilation unit with a filter. The openings and/or fans must provide a flow rate at least equal to that of the drive fans (refer to the product characteristics).

- Use special filters with IP 54 protection.
- Remove the blanking cover from the top of the drive.

**Dust and Damp Proof Metal Enclosure (IP 54)**

The drive must be mounted in a dust and damp proof enclosure in certain environmental conditions: dust, corrosive gases, high humidity with risk of condensation and dripping water, splashing liquid, etc.

This enables the drive to be used in an enclosure where the maximum internal temperature reaches 50°C.
