

NetShelter SX Baying Bracket Installation

All of the necessary baying hardware is included in the hardware bag, and attached to the enclosure. You do not need to order anything extra. On the hinge side of the door there are two small oval plates mounted to the frame. Simply loosen the screw and rotate the plate to a horizontal position and match up with the mounting hole on the adjacent enclosure. There are two mounting positions on the bracket to choose from: 24" centers and 600 mm centers.

To fill the space left from baying at 24" centers we offer AR7600 for 42U and 48U NetShelter SX enclosures.

If you have lost or misplaced the screws you can obtain replacements locally. They are M5X12 flathead steel.
