

NetShelter CX Wall Clearance

The exhaust fans of the NetShelter CX vent to the sides. The back of the rack can be placed against a wall if desired. If the rack is being installed in a corner please leave at least 6 inches of open space between the side of the NetShelter CX and the wall.

It is not recommended to install a NetShelter SX where the back and both sides are against a wall.

Correct

Uncontrolled if printed. Electronic Storage and Reference Recommended.
